

SUNSHADE ASSEMBLY AND VEHICLE COMPRISING SUCH A SUNSHADE ASSEMBLY

ABSTRACT

5 A sunshade assembly for use in a vehicle
comprises a flexible sunshade screen and two spaced,
parallel guides for receiving and guiding two
parallel lateral edges of the sunshade screen. Each
of the lateral edges of the sunshade screen comprises
10 loop-shaped provisions. Each guide comprises a
longitudinal channel which opens towards the sunshade
screen through a longitudinal slot. A core member is
positioned in the channel and extends therein such,
that between the core member and the surrounding
15 guide a space is defined for slidably receiving the
loop-shaped provisions. The slot has a width which is
smaller than the combined width of the core member
with surrounding loop-shaped provisions.
